Moving to a **greener** future!

Preferred Meal Systems firmly believes in the conservation of both our ecological and economic resources. Anticipating and meeting our customers' needs, we have been hard at work introducing a whole new line of Eco-Friendly and Eco-Responsible packaging.

Our new Eco-Friendly packaging is designed to be both better for our customers and our environment. The benefits of this type of packaging include:

- The tray base is produced using 100% renewable wood fiber resources
- The fiber manufacturing process is 100% chlorine free
- All reclaimed materials are repurposed instead of ending up in landfills
- Water used in the manufacturing process is 100% recycled
- The trays have been approved to be recycled at various composting sites throughout the country
- The "easy peel" film on top of the containers will peel off much easier
- The "easy peel" film will mechanically break down during the commercial composting process

Preferred Meal Systems will continue to explore the use of innovative and sustainable packaging solutions that will exceed the quality standards our customer's require. We are now offering our customers more earth friendly products than ever before, and will continue to find ways to decrease our carbon footprint wherever possible.
